Well done!

Aww yeah, you successfully read this important alert message. This example text is going of content.

Whenever you need to, be sure to use margin utilities to keep things nice and tidy.

Buttons

Bootstrap includes several predefined button styles, each serving its own semantic purpose, with a few extras thrown in for more control.

```
<button type="button" class="btn btn-primary">Primary</button>
<button type="button" class="btn btn-secondary">Secondary</button>
<button type="button" class="btn btn-success">Success</button>
<button type="button" class="btn btn-danger">Danger</button>
<button type="button" class="btn btn-warning">Warning</button>
<button type="button" class="btn btn-info">Info</button>
<button type="button" class="btn btn-light">Light</button>
<button type="button" class="btn btn-dark">Dark</button>

<button type="button" class="btn btn-link">Link</button>
```
Button tags

The .btn classes are designed to be used with the <button> element. However, you can also use these classes on <a> or <input> elements (though some browsers may apply a slightly different rendering).

```
<a class="btn btn-primary" href="#" role="button">Link</a>
<button class="btn btn-primary" type="submit">Button</button>
<input class="btn btn-primary" type="button" value="Input">

Navbar

Navbars are responsive meta components that serve as navigation headers for your application or site.

They begin collapsed (and are toggleable) in mobile views and become horizontal as the available viewport width increases.

    </div>
</nav>
```
Pagination

Provide pagination links for your site or app with the multi-page pagination component, or the simpler pager alternative.

```
<nav aria-label="Page navigation example">
  <ul class="pagination">
    <li class="page-item"><a class="page-link" href="#">Previous</a></li>
    <li class="page-item"><a class="page-link" href="#">1</a></li>
    <li class="page-item"><a class="page-link" href="#">2</a></li>
    <li class="page-item"><a class="page-link" href="#">3</a></li>
    <li class="page-item"><a class="page-link" href="#">Next</a></li>
  </ul>
</nav>
```

Default pagination
| Previous | 1 | 2 | 3 | Next |

Pagination (2)

Links are customizable for different circumstances. Use .disabled for unclickable links and .active to indicate the current page.

```html
<nav aria-label="...">
  <ul class="pagination">
    <li class="page-item disabled">
      <a class="page-link" href="#" tabindex="-1">Previous</a>
    </li>
    <li class="page-item"><a class="page-link" href="#">1</a></li>
    <li class="page-item active">
      <a class="page-link" href="#">2 <span class="sr-only">(current)</span></a>
    </li>
    <li class="page-item"><a class="page-link" href="#">3</a></li>
    <li class="page-item">
      <a class="page-link" href="#">Next</a>
    </li>
  </ul>
</nav>
```

Progress bars

Provide up-to-date feedback on the progress of a workflow or action with simple yet flexible progress bars.

```
<div class="progress">
  <div class="progress-bar" role="progressbar" aria-valuenow="60" aria-valuemin="0"
aria-valuemax="100" style="width: 60%;">
    <span class="sr-only">60% Complete</span>
  </div>
</div>
```

Remove the <span> with .sr-only class from within the progress bar to show a visible percentage.
60%

```
<div class="progress">
  <div class="progress-bar" role="progressbar" aria-valuenow="60" aria-valuemin="0"
aria-valuemax="100" style="width: 60%;">
    60%
  </div>
</div>
```

Contextual alternatives

Progress bars use some of the same button and alert classes for consistent styles.

```
<div class="progress">
  <div class="progress-bar bg-success" r
</div>
<div class="progress">
  <div class="progress-bar bg-info" role
</div>
<div class="progress">
  <div class="progress-bar bg-warning" r
</div>
<div class="progress">
  <div class="progress-bar bg-danger" ro
</div>
```
Striped

Uses a gradient to create a striped effect.

```
<div class="progress">
  <div class="progress-bar progress-bar-striped bg-success" role="progressbar" style="width: 25%" aria-valuenow="25" aria-valuemin="
</div>
```

Modals

Modals are streamlined, but flexible, dialog prompts with the minimum required functionality and smart defaults.

Modals (2)

```html
<div class="modal" tabindex="-1">
  <div class="modal-dialog">
    <div class="modal-content">
      <div class="modal-header">
        <h5 class="modal-title">Modal title</h5>
        <button type="button" class="btn-close" data-bs-dismiss="modal" aria-label="Close"></button>
      </div>
      <div class="modal-body">
        <p>Modal body text goes here.</p>
      </div>
      <div class="modal-footer">
        <button type="button" class="btn btn-secondary" data-bs-dismiss="modal">Close</button>
        <button type="button" class="btn btn-primary">Save changes</button>
      </div>
    </div>
  </div>
</div>
```
Popover

You can add small overlays of content, like those on the iPad, to any element for housing secondary information.

Popovers whose both title and content are zero-length are never displayed.

```html
<button type="button" class="btn btn-lg btn-danger" data-bs-toggle="popover"
        title="Popover title"
        data-bs-content="And here's some amazing content. It's very engaging. Right?">
    Click to toggle popover
</button>
```
